

Coastal facts and figures jumble

The New Forest coastline is an amazing place. There is so much wildlife, history and special scenery to find out about. Here are some of the most amazing facts about the coast to share, but unfortunately they are all mixed up!

We need some volunteers to help match the figures with the correct fascinating fact. (Ask 10 pupils to come out to the front and hold up the cards. The rest of the group helps to match up the mixed up pairs.)

Correct Answers

26 miles

Length of National Park coastline

185,000

Number of eggs laid by a shore crab each year!

50,000

Number of birds that spend the winter on the New Forest coast

1.5 - 3.5^o C

Predicted increase in summer temperatures by 2050

6000BC

The Isle of Wight becomes separated from mainland England by rising sea levels

Cards to print/ enlarge/jumble etc

26 miles	Length of National Park coastline
185,000	Number of eggs laid by a shore crab each year!
50,000	Number of birds that spend the winter on the New Forest coast
1.5 - 3.5° C	Predicted increase in summer temperatures by 2050
6000BC	The Isle of Wight becomes separated from mainland England by rising sea levels
